No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 32

Number 1, July 1986

KEVIN V. LEMLEY, BERND ZIMMERHACKL, REX L. JAMISON, AND WILHELM KRIZ. The Shape of Renal Vasa Recta Capillaries and Its Effect on Calculation of Single Capillary Blood Flow 1

ANA M. SCHOR AND SETH L. SCHOR. The Isolation and Culture of Endothelial Cells and Pericytes from the Bovine Retinal Microvasculature: A Comparative Study with Large Vessel Vascular Cells 21

GEORGE C. KRAMER, LILLIAN SIBLEY, KNUT AUKLAND, AND EUGENE M. RENKIN. Wick Sampling of Interstitial Fluid in Rat Skin: Further Analysis and Modifications of the Method 39

P. DAVIES, G. BURKE, AND L. REID. The Structure of the Wall of the Rat Intraacinar Pulmonary Artery: An Electron Microscopic Study of Microdissected Preparations 50

ALLAN C. ROTH AND KENNETH WADE. The Effects of Transmural Transport in the Microcirculation: A Two Gas Species Model 64

KAREL TYML. Capillary Recruitment and Heterogeneity of Microvascular Flow in Skeletal Muscle before and after Contraction 84

MARK ROSOLOWSKY AND HARVEY R. WEISS. Quantitative Morphometric Determination of Arteriolar and Capillary Perfusion within Ischemic Rabbit Left Ventricle 99

B. R. MCAUSLAN AND W. REILLY. Selenium-Induced Cell Migration and Proliferation: Relevance to Angiogenesis and Microangiopathy 112

CESARE ORLANDI, JOSEPH L. BLACKSHEAR, AND NORMAN K. HOLLENBERG. Specific Increase in Sensitivity to Serotonin of the Canine Hindlimb Collateral Arterial Tree via the 5-Hydroxytryptamine-2 Receptor 121

ANDREA REMUZZI AND WILLIAM M. DEEN. Theoretical Effects of a Distribution of Capillary Dimensions on Glomerular Ultrafiltration 131

Number 2, September 1986

ROBERT R. MYERS, HIDENORI MURAKAMI, AND HENRY C. POWELL. Reduced Nerve Blood Flow in Edematous Neuropathies: A Biomechanical Mechanism 145

ARNOLD G. SALOTTO, LAWRENCE F. MUSCARELLA, JULIUS MELBIN, JOHN K.-J. LI, AND ABRAHAM NOORDERGRAAF. Pressure Pulse Transmission into Vascular Beds 152

WILLIAM J. FEDERSPIEL AND ALEKSANDER S. POPEL. A Theoretical Analysis of the Effect of the Particulate Nature of Blood on Oxygen Release in Capillaries 164

SERGIO VILLASCHI, LEWIS JOHNS, MICHAEL CIRIGLIANO, AND GIUSEPPE G. PIETRA. Binding and Uptake of Native and Glycosylated Albumin–Gold Complexes in Perfused Rat Lungs 190

Francis L. Belloni, Stephen P. Bruttig, Rafael Rubio, and Robert M. Berne. Uptake and Release of Adenosine by Cultured Rat Aortic Smooth Muscle 200

Joel L. Bert, Richard H. Pearce, and Joyce M. Mathieson. Concentration of Plasma Albumin in Its Accessible Space in Postmortem Human Dermis 211

J. M. Mathieson, R. H. Pearce, and J. L. Bert. Size of a Plasma Protein Affects Its Content in Postmortem Human Dermis 224

Richard C. Schaeffer, Jr., Richard R. Renkiewicz, Shawn-Marie Chilton, Donna Marsh, and Richard W. Carlson. Preparation and High-Performance Size-Exclusion Chromatographic (HPSEC) Analysis of Fluorescein Isothiocyanate–Hydroxyethyl Starch: Macromolecular Probes of the Blood–Lymph Barrier 230

Brief Communications

E. Vicaut. Statistical Estimation of Parameters in Microcirculation 244

Lynn J. Groome and Gary T. Kinasewitz. Dependence of Permeability on Solute Concentration: Effects Due to Membrane Heteroporosity 248

Charles F. Pilati and Michael B. Maron. A Technique to Measure the Reflection Coefficient Using Endogenous Vascular Indicators 255

Technical Reports

Vijay Corattiyl and Eugene C. Eckstein. Regional Platelet Concentration in Blood Flow through Capillary Tubes 261

Hildegard R. Maricq. Comparison of Quantitative and Semiquantitative Estimates of Nailfold Capillary Abnormalities in Scleroderma Spectrum Disorders 271

Letters to the Editor 277

Number 3, November 1986

Kurt H. Albertine and Norman C. Staub. Vascular Tracers Alter Hemodynamics and Airway Pressure in Anesthetized Sheep 279

Raffaele del Guercio, Giuseppe Leonardo, and Maria Rosaria Arpaia. Evaluation of Postischemic Hyperemia on the Skin Using Laser Doppler Velocimetry: Study on Patients with Claudicatio Intermittens 289

J. W. Schmidley and S. L. Wissig. Basement Membrane of Central Nervous System Capillaries Lacks Ruthenium Red-Staining Sites 300

K. Ley, A. R. Pries, and P. Gaehtgens. Topological Structure of Rat Mesenteric Microvessel Networks 315

T. C. Skalak and G. W. Schmid-Schönbein. The Microvasculature in Skeletal Muscle. IV. A Model of the Capillary Network 333

David O. DeFouw and John Z. Shumko. Pulmonary Microcirculation: Differences in Endothelia of Subpleural and Alveolar Capillaries 348

G. M. Fuh, K. Bensch, M. A. Karasek, and R. H. Kramer. Synthesis of Basement Membrane-Specific Macromolecules by Cultured Human Microvascular Endothelial Cells Isolated from Skin of Diabetic and Nondiabetic Subjects 359

Roland N. Pittman and Mary L. Ellsworth. Estimation of Red Cell Flow in Microvessels: Consequences of the Baker–Wayland Spatial Averaging Model 371

Donald Bottaro, David Shepro, and Herbert B. Hechtman. Heterogeneity of Intimal and Microvessel Endothelial Cell Barriers *in Vitro* 389

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for the printer. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Style Manual,* 1986, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29,** 161–175.

ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. *In* "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, eds.), pp. 99–134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
